### **DETAILED ACTION**

### Status of Claims

Claim 1 is amended. Claims 1-3 are pending in this application per the response to office action filed December 27, 2005.

## Response to Arguments

Applicant's arguments with respect to claims 1-3 have been considered but are moot in view of the new ground(s) of rejection.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-3, are rejected under 35 U.S.C. 103(a) as being unpatentable over Rogers et al U.S. patent Application Publication No. 2002/0049549 A1 in view of Pollock U.S. Patent No. 5,923,572.

1. As per <u>claim 1</u>, Rogers et al discloses a method for registering and communicating between a central control authorization point and a plurality of remote location devices comprising the steps of:

providing a said remote location device (0025; 0026; 0045);

preparing said remote location device for registration (0025; 0026; 0045);

registering said remote location device on said central control authorization point and transmitting an encrypted address unique to each said remote location device from said central control authorization point and storing said unique address on said remote location device (see fig. 2, 0025; 0026; 0045; 0047); and

utilizing said unique encrypted address for communication between said central control authorization point and said remote location device (figs. 1 and 2; 0140; 0141; 0143; see claim 16).

What Rogers et al does not explicitly teach is transmitting an encrypted address unique to each remote location device.

Pollock discloses transmitting an encrypted address unique to each remote location device (col. 4, lines 40-50).

Accordingly it would have been obvious to one of ordinary skill in the art at time of applicant's invention to modify the method of Rogers et al and incorporate a method of transmitting an encrypted address unique to each remote location device as taught by Pollock, in order to ensure unique identification of the remote device.

- 2. As per <u>claim 2</u>, Rogers et al further discloses the method wherein said remote location device comprises a fluid meter (0002; 0003; 0020; 0021; 0022).
- 3. As per <u>claim 3</u>, Rogers et al further discloses the method wherein said remote location device comprises a tank level monitor (0044; 0045; 0046; 0143).

#### Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Examiner's Note: Examiner has cited particular columns and line numbers in the references as applied to the claims below for the convenience of the applicant.

Although the specified citations are representative of the teachings in the art ad are applied to the specific limitations within the individual claim, other passages and figures may apply as well. It is respectfully requested that the applicant, in preparing the responses, fully consider the references in entirety as potentially teaching all or part of the claimed invention, as well as the context of the passage as taught by the prior art or disclosed by the examiner.
